COUNTRY NAME LOOKUP TOOL

The country name lookup tool (CNLT) has been designed to help quickly establish the language or languages the user speaks. Showing the complete lists enables the user to indicate the country in which they originate and the quick links to the various tools and guides.

Gayther is an online service home to one of the world's largest collections of current and relevant LGBTQIA+ information. Though the service was built in English, many tools, services and guides have been designed to support and aid conversations. These offer users different ways to communicate in other languages, especially during difficult situations or when needing help. We have created the country lookup to aid users in finding the right services and languages quickly.

The country lookup tool has been designed to show country names in their local languages. If someone is not a native English speaker, they can find their country from the list of over two hundred countries below. Once found, they can reference the resources available on Gayther to aid them in communicating. Tools such as the Medical Diagnosis Interpreter, the Refugee Communication Tool, Emergency Telephone numbers or any of the six interactive directories.

HOW TO USE

For the list, the country name in the local languages is arranged in alphabetical order and for the map, by continent. The lookup tool is helpful when communicating with someone where you cannot establish the language or languages they speak. You can show them the pages and enable them to scroll down or point to the relevant regional map until they find the correct language and country name. Once the country name has been found, you can select that country in any of the online tools available on Gayther.
