THREE ELEMENTS OF INFORMATION THAT COULD SAVE YOUR LIFE

When in need of medical assistance, receiving treatment or in the event of an emergency, getting help is crucial. Communicating your current state of health, allergies or pre-existing medical conditions quickly to a medical professional can be a matter of life and death. This situation can be made worse when travelling and speaking to non-native English speakers. Medically trained individuals can provide you with the urgent care you need but who might be struggling to understand what is being explained to them. To help you in this situation, we created the Medical Diagnosis Interpreter (MDI).

The MDI is an innovative way in which you only need to point or mark how you are thinking and feeling, using the many illustrations and translated terms. The tool enables the medical professional to use what is being shown to them to help them diagnose any underlying problems. The MDI is grouped in logical sections. Some can be completed before seeking medical attention (sections A, B, C, D and H). The remaining sections can be used during an emergency (section E, F and G). All of the vital information needed to help the medical professional make an informed diagnosis. A diagnosis that will ultimately help in treating the condition, virus or illness.

A successful diagnosis typically requires three elements of crucial information:-

- Details of any pains, conditions or symptoms you have been experiencing, what hurts, where and for how long
- Any medications you have already taken and how long ago
- Any allergies, pre-existing conditions and important information about you to help with the diagnosis and treatment

PAIN	SYMPOTM	MEDICATION	DURATION	MEASUREMENT

The following sections have been designed to help you communicate any pains, symptoms you are experiencing or any medication you have taken when speaking to a medical professional. You can either point or mark the relevant boxes, describing your symptoms quickly and easily using the Medical Diagnosis Interpreter (MDI).

HOW TO COMMUNICATE

Communicating in a four-step process, let us start by going to section E or the areas of pain to begin

Step 1 - Please go to the numbers bar at the top of section E, where you can either point or tick (✓) the number of pains you are experiencing. One for a single area of pain, two for the second pain and so on

Step 2 – When ready to describe your first or only pain, you can either point or tick the region of the body (front or back) or specific body parts where the pain is located. When you have finished highlighting all of the areas, you can either point to the stop or next marker if you have more than one pain. Both markers can be found at the top right-hand side of the page

Step 3 – Next, you will need to indicate how long you have been experiencing the pain. You do this by selecting the duration marker, followed by the minutes, hours or days markers (for example, 10 + minutes). If you are trying to describe multiples, such as 30 minutes, you could point to the ten marker three times (e.g., 10 plus 10 plus 10), followed by the minute marker

Step 4 – Finally, we will highlight the pain level on a scale from 1 to 10. If you are suffering multiple pains, go back to the beginning of section E, select two from the number scale to describe the subsequent pain and so on.

You will follow a similar process for symptoms (section F) and any drugs/medication taken (section G). In the medication taken section, you will also be required to use the numbering system to describe measurements, such as 1 + 2 + thousand + mg, which would represent one 2000mg tablet)

Important: During an emergency, you must convey areas of pain, symptoms and any drugs or medication you have taken quickly and efficiently. If a pain, symptom or drug/medication is not listed, write it within the relevant 'other' box, remembering to use BLOCK CAPITAL letters. Providing any information that is not listed helps the medical professional to look it up and translate the terms quickly to form a diagnosis
